Lecture on how
important logical
thinking to get good
job/income and how
important the
support by families

SESSION 3

Group discussion on
challenges and
planning action plans
for overcoming the
challenges as per
schools

HIGHLIGHTS OF THE PROGRAM

Tatopani Rural Municipality, Jumla, has implemented "Math Kachahari", parents-teachers gathering, to learn how early grade math and supporting learning at home are important. 240 representatives (parents, students and teachers) were called and enhanced their readiness to implement necessary actions at their schools. Main discussion points were as follows:

Program Outputs in General

- **Challenges:**
 - Students' absenteeism
 - Less support for studying by parents
 - Less collaboration between schools and parents
 - Limited capacity of teachers
- **Actions:**
 - Enrolment campaign / home visits
 - At least 30mins study support home
 - Parents interaction program
 - Training on teaching methodology

Parents, students, and teachers brainstormed the challenges and actions to be taken together in the group discussion during the program.

The action plans will be brought to the schools and implemented. Implementation process is most important and the participants will be its responsible persons.

These activities are sustainable to be managed by school budget under the School Improvement Plan.

“The more parents’ support for children learning at home, the more high score the children get” “Every day math exercises will be the first step of their brilliant career”

- JICA IMEN Project (2022) “How Math Education is Important”
